POST OFFICE BOX 1 • OAK RIDGE, TENNESSEE 37831-0001

November 19, 2012

Oak Ridge Municipal Planning Commission
City of Oak Ridge
P.O. Box 1
Oak Ridge, Tennessee

Attention: Terry C. Domm, Chairman

Dear Planning Commission Members:

Transmitted herewith is the Capital Improvements Program (CIP) for fiscal years 2014-2019 for the City of Oak Ridge. The organization of the CIP and the methodology of reviewing the CIP continue to reflect an emphasis on a fiscally constrained document as well as a streamlined review process.

The CIP document has been broken into the following departmental categories:

- Board of Education
- Electric Department
- Fire Department
- Public Works Department
- Recreation and Parks Department

Within each departmental section individual projects are divided into active and placeholder projects, if applicable. At the beginning of each active departmental section is a summary sheet that details each of the projects and anticipated expenditures for the years 2014-2019. There is also a summary sheet for placeholder projects, if present. Placeholder projects have an anticipated cost projection that is referenced in a separate column.

Section II of the document is the Summary Section, which provides information by several categories. First is a summary of Programs by Responsible Department. Second is a summary of individual Projects by Responsible Department. Finally, there is a summary report of all projects that have been moved to a placeholder status.

The last part of the document identifies maintenance projects. These are broken down by Programs by Responsible Department, and individual Projects by Responsible Department. Because maintenance is not a capital expenditure, individual entries are not included in the CIP document.

A change in the process this year is the priority ranking of Capital Projects scheduled for 2014. Normally Commission members identify these projects as either "Low, Medium or High" in priority. This year we are asking for greater direction. Please assign a numeric priority only for the projects ranked as HIGH. Planning staff will provide a form that will facilitate priority ranking.

We feel the proposed CIP for 2014-2019 continues to address the needs of individuals who use the document as a guide and creates a tool for improvement of our functional support systems including schools, sewer and water services, fire safety, recreation, and electric services. This effort continues to identify the needs of our residents to establish a high quality of life while maintaining the City's infrastructure. I am pleased to submit this document to the Oak Ridge Municipal Planning Commission for review and approval.

Sincerely,

Mark S Watson

Mark Watson
City Manager

CITY OF

OAK RIDGE MUNICIPAL PLANNING COMMISSION

POST OFFICE BOX 1 • OAK RIDGE, TENNESSEE 37831-0001

January 5, 2013

Honorable Mayor and
Members of City Council
City of Oak Ridge
P.O. Box 1
Oak Ridge, TN 37831

Attention: Mark Watson, City Manager

Dear Members of City Council:

The Oak Ridge Municipal Planning Commission voted on December 20, 2012, to approve and transmit to City Council a Capital Improvements Program (CIP) in accordance with the City Charter. The CIP is submitted for City Council's use in providing guidance to the City Manager in his preparation of the annual budget.

The Commission has carefully considered the capital improvements and maintenance projects of the CIP that were drafted by the staff, with emphasis on the FY 2014 proposals. As has been the case for the past several years, the number of capital projects recommended in the first year of the CIP was limited, reflecting the current state of the economy and an on-going emphasis on fiscal restraint. Staff and public input was obtained at a workshop held on November 29, 2012.

The Commission acknowledges and appreciates the assistance and cooperation of the staff in the preparation and review of these proposals. The staff has made a conscientious effort to identify the most needed projects and look for ways to delay, reduce or delete other projects.

With only one significant change, these projects are the same as those forwarded to the Commission by the City Manager. The Commission noted the following items for special attention by City Council:

Section III – Board of Education.

The Preschool/Administration Building replacement continues to be the top capital improvement priority of the Board of Education. The current structure is a maintenance intensive facility with safety, health, and energy efficiency issues. Increasing maintenance costs are met at the expense of other school facilities. The Planning Commission acknowledges the need to replace the current Preschool/School Administration Building, but resources are not available at the current time. It was estimated that the earliest that funding might be available would be FY 2018. In view of the funding situation, the Commission again suggested that alternate third party financing (e.g. build and lease back) be explored as a way to accelerate the replacement. The Board of Education agreed to consider alternate methods.

During previous CIP discussion the Commission suggested that leasing available office space be considered for the administrative offices. This would free the site for development while minimizing capital expense in the short term.

Section VII – Parks and Recreation

VII- 24 The Commission moved $250,000 for course improvements to the rowing venue to FY 2014. Rowing is viewed as one of the unique amenities that distinguish Oak Ridge from competing communities and the Commission recommends that upgrading the course and facilities be a priority.

VII-29 A new Placeholder item was added for proposed upgrades to Bobby Hopkins Baseball Field. The improvements, including an indoor batting facility, would be privately financed.

Respectfully submitted,

Terry C. Domm

Terry C. Domm, Chair
Oak Ridge Municipal Planning Commission

Project:	Renovation of Jefferson Middle School	ProjectType:	Capital
Program:	Schools	Responsible Department:	Board of Education

Description: Jefferson Middle School was constructed in 1968 with a major addition in 1994 to incorporate a new grade level. This school like Robertsville serves 5th through 8th grade. The school has need of additional parking space to accommodate sporting events and programs. The gymnasium has bleachers on one side and the little theater is in need of upgrades in seating and stage size. The Administration, located on the second level, is not located in an area that provides for current security needs. Access to the building is unable to be monitored directly due to this location. Structurally the building is sound but doors, windows, and interior finishing need to be upgraded to meet current code, educational, or design standards.

Status: Some of the original mechanical systems have been upgraded while some still remain. The chiller installed during the 1994 addition will require replacing in the next 5-10 years. A large portion of the ACBMs have been removed but, some quantities still remain. Upgrades in electrical, mechanical, and data systems are still needed as well as meeting current life safety codes, building and fire codes, ADA, and 21st century classroom standards. Also, due to some classroom space being utilized as technology classes, the HVAC systems need to be designed to accommodate the different heating and cooling needs presented by these changes. Regular maintenance and some capital maintenance projects has improved this facility's IAQ and energy management, but this facility is still in need of a major renovation to address long term issues.

Justification: The Jefferson Middle School facility was evaluated utilizing the facility study completed in 2007 by Cope and Associates Inc. Their recommendation called for a 7.7 million renovation using 2007 construction costs and known deficiencies. An in-depth study and construction estimate would have to be performed prior to project approval to determine actual costs.

Complies With Policies F-1, F-16, P-12, P-13, Q-6, Q-9, and Q-12

Project:	Replace Preschool/School Services Complex/Alt. School	ProjectType:	Capital
Program:	Schools	Responsible Department:	Board of Education

Description: The Preschool/School Administration Building, housed in the old Pine Valley School, is a WW II vintage facility in the Oak Ridge School system that has been renovated, remodeled, and expanded at least six times and has exceeded its useful life. The original building was not intended to be a long term facility, and due to its wood frame type construction does not lend itself to another major renovation to correct numerous Life Safety Code and ADA deficiencies. In addition this facility is at point that does not allow for additional expansion of technology, electrical needs, or parking needs. The current Preschool program and other special area services for children utilize over 50% of the facility. The School Administration consisting of the Teacher Center, OREA offices, Pupil Services, Human Resources, Business and Support Services, Curriculum Coordinator Offices, The Superintendent and Assistant Superintendent Offices, Extended Childcare office, and School Health Coordinator occupies the rest of the space. Due to Life Safety Code issues, the IT department had to be moved and the space they occupied was reclassified as unoccupied warehouse space. This facility includes portable office and classroom spaces that are in poor condition and range from 15 to 30 years in age.

Status: A programming and Master Plan Study of the School Administration Building was completed By Barber and McMurry, Inc. during FY 2000. The plan evaluated current space requirements and building deficiencies, provided concepts for site options, and gave an estimated cost for implementation of the plan. Also, an architectural study was completed for the Preschool and Alternative School programs, but with failure of a referendum, the projects were tabled pending available funding. In 2007, Cope and Associates Inc. completed a facility study for all the facilities in the Oak Ridge Schools except for the High School, which was under construction. The findings by Cope and Associates indicated that significant to critical deficiencies existed in the School Administration and Preschool program and in the physical conditions of the buildings. Their recommendation echoed the same recommendations of the earlier study from 2000, that it would be more cost effective to abandon the current facility and seek a new or remodeled facility.

Justification: The present Preschool/School Administration Building is housed in the old Pine Valley School, constructed in 1944. The wood frame building is at a stage where major systems including electric, flooring, exterior siding, windows and doors, HVAC systems, plumbing, and fire and life safety systems are nearing or have exceeded their useful life. The building is not appropriately sized for the current Preschool program, causing portions to be housed at another school site. Studies indicate that the School Administration and the Alternative school can both be located in the current square Footage of the G-building facility. This would need to be the first stage of a remodel/construction project for replacing and renovating the School Administration/preschool Building. Once the School administration function has been relocated to a remodeled G-building, the lower portion of the building, 3-5 portables, and the old cafeteria building can be demolished, making room for construction of a new Preschool facility on existing site. Preliminary estimates utilizing CPI changes and the estimates provide by the report from Cope and Associates indicate that the cost of the Alternative school / School Administration relocation into G-building would be approximately $6,800,000. And the new construction of the Preschool building would be approximately $8,500,000. An in-depth study and construction estimate would have to be performed prior to project approval. Past delays in approval of these projects have only increased long term costs. Future delays will require not only additional construction costs but, will also increase the risk of health and safety problems for the occupants of this facility.

Complies With Policies F-1, F-16, Q-6, Q-9, Q-12, P-12, and P-13

Project:	Robertsville Middle School	ProjectType:	Capital
Program:	Schools	Responsible Department:	Board of Education

Description: Robertsville Middle School was originally constructed in 1953 with a major addition in 1994. This facility has had many of the original systems from 1953 replaced or upgraded, but serious and significant deficiencies are yet to be addressed and would be cost prohibitive in any project short of a major renovation. The building is in need of plumbing, electrical, mechanical, and technology upgrades to meet current 21st century classroom standards. Due to the age of the facility, it is known to have asbestos containing building materials (ACBMs) that will also require remediation during any future construction project. Guidance, administration, faculty parking, special areas, fire and life safety systems, and science programs are some of the areas known to be deficient in programming or current code standards.

Status: The 2007 facility study noted many issues including, the middle school science program working in classrooms designed for 1953 and even with minor changes made over the years; it is still inefficient for teaching modern lab technique and effectively incorporating technology. Restrooms are still 1953 vintage and are in need of a major overhaul to bring them up to current code compliance. Even though the rooms are heated and cooled, the systems can be loud and hard to teach over the noise level, in addition, current standards of air exchange cannot be met with the outdated design. With regular maintenance and some capital maintenance projects, this facility has improved its IAQ, energy management, and extended the life of lockers and auditorium seating, but it is still in need of a major renovation to address long term utilization.

Justification: The Robertsville Middle School facility was evaluated utilizing the facility study completed in 2007 by Cope and Associates Inc. Their recommendation called for a 7.1 million renovation using 2007 construction costs and known deficiencies. An in-depth study and construction estimate would have to be performed prior to project approval to determine actual costs.

TOTAL CAPITAL IMPROVEMENTS PROGRAM	**$0**					**$13,000**	

Project:	Glenwood Elementary School	ProjectType:	Capital
Program:	Schools	Responsible Department:	Board of Education

Description: Glenwood Elementary School construction began in 1988 and was completed in 1991. No additions have taken place but a major HVAC renovation was completed in 2007 which upgraded the system to current code standards for IAQ and energy management.

Status: Evaluations by Cope and Associates indicate the facility is in need of replacement of the old floor coverings and removal of the old through the wall HVAC units that were abandoned in place after the major HVAC renovation was completed. Recommendations were also made to add space to the Media Center, special area classes, administration, and update the restrooms for ADA compliance.

Justification: Glenwood Elementary School was evaluated utilizing the facility study completed in 2007 by Cope and Associates Inc. Their recommendation called for a 2.4 million renovation using 2007 construction costs and known deficiencies. An in-depth study and construction estimate would have to be performed prior to project approval to determine actual costs.

Project:	Linden Elementary School	ProjectType:	Capital
Program:	Schools	Responsible Department:	Board of Education

Description: Linden Elementary School was constructed in 1968 with a small renovation 1998 for ADA improvements and a stage addition to the gymnasium. The school serves K-4th grades and has had an increase in student enrollment in recent years. Linden was originally constructed with an open format which was later changed to individual classrooms by the addition of walls in each grade level pod. All traffic enters the site from a single road which causes considerable difficulty with bus and parent traffic mixing.

Status: Linden was originally constructed with an open format which was later changed to individual classrooms by the addition of walls in each grade level pod. The new spaces do not meet current fire and life safety code regulations and will need to be redesigned to eliminate the open plenum ceiling, provide return air ductwork for the HVAC system, and extend the walls to the roof/ceiling deck. All life safety systems will need to be upgraded, the electrical systems are insufficient for current needs, administration and guidance areas do not meet present day educational standards, special areas are undersized or designs are outdated. Doors, windows, interior finishes, parent and student drop offs need improvement.

Justification: Linden Elementary School was evaluated utilizing the facility study completed in 2007 by Cope and Associates Inc. Their recommendation called for a 5.7 million renovation using 2007 construction costs and known deficiencies. An in-depth study and construction estimate would have to be performed prior to project approval to determine actual costs.

Project:	Willow Brook Elementary School	ProjectType:	Capital
Program:	Schools	Responsible Department:	Board of Education

Description: Willow Brook Elementary School was originally constructed in 1949 with an addition and major renovation in 1990. Two portables were added in 2010 to provide for the increasing student enrolment and programming needs. This school operates on a year round schedule with intercession programs between the grading periods.

Status: The kitchen and cafeteria are vastly undersized for the number of student lunches prepared and served each day. Also the cafeteria doubles as the space used for before and after school care which limits that program's effectiveness and places a burden on the staff to clean and prepare the area each morning and afternoon for the next program needs. The Media Center, administration, guidance, special area, parking, parent and student drop off; need design upgrades and improvements to meet current education and code requirements. This facility also needs improvements in electrical, mechanical, and data systems to address code or program deficiencies.

Justification: The Willow Brook Elementary School facility was evaluated utilizing the facility study completed in 2007 by Cope and Associates Inc. Their recommendation called for a 2.3 million renovation using 2007 construction costs and known deficiencies. An in-depth study and construction estimate would have to be performed prior to project approval to determine actual costs.

Project:	Woodland Elementary School	ProjectType:	Capital
Program:	Schools	Responsible Department:	Board of Education

Description: The Woodland Elementary School building was originally constructed in 1948 and has undergone many renovations and expansions over the years. This facility, located in the Woodland community currently utilizes portable classrooms to accommodate the existing programs. Also, due to the increasing enrollment numbers at this facility, several special area classes, the cafeteria, kitchen, media center, guidance, administration, technology, parking, building storage , and drop off and pick up areas are inadequate for current program needs.

Status: Several spaces are currently inadequate for programming needs and such deficiencies will eventually be a hindrance to providing a facility conducive to a learning environment

Justification: The Woodland School facility was evaluated utilizing the facility study completed in 2007 by Cope and Associates Inc. Their recommendation called for a 3.5 million renovation using 2007 construction costs and known deficiencies. Following a 1 million dollar renovation to the school to address the most serious of structural issues, the funds needed to bring this facility up to current code compliance and instructional needs will have to be re-evaluated. An in-depth study and construction estimate would have to be performed prior to project approval to determine actual costs.

TOTAL CAPITAL IMPROVEMENTS PROGRAM	**$4,550**	**$3,430**	**$2,555**	**$1,100**	**$1,055**	**$1,055**	**$13,745**

Project:	Billing Software, SCADA and Remote Metering	ProjectType:	Capital
Program:	Utilities	Responsible Department:	Electric

Description: This program combines three significant efforts that will be required in the next few years to operate effectively under the new TVA rate structures, a new customer service and billing software package, AMR & SCADA. SCADA (Supervisory Control and Data Acquisition) allows remote monitoring and operation of the Electric System. AMR (Automated Meter Reading) will permit new rate structures to be implimented and reduce some cost. New responsive software based on current technology will be needed to drive these programs.

Status: The installation of fiber optic cable will provide a communications back bone from which SCADA operations can be launched. The beginning of this system was delayed due to funding. An engineering review of available SCADA options, as well as an evaluation of their ability to reduce operational and energy cost needs to be undertaken. A thorough review of available Automated Meter Reading Systems is currently underway with vendor selection planned for this year. Evaluation of its interface abilities is needed.The system will require new software both for billing and customer interface to be effective. Costs shown are still being developed and could change. Allocation of cost has not been finalized.

Justification: TVA has already placed Oak Ridge on rates wholesale Time of Use Rates that reward voltage control and direct load control. Oak Ridge has large commercial customers on Time of Use Rates and some utilities have proposed to move all their retail customers to mandatory Time of Use Rates. There are now significant financial rewards for installing the technology described in this item and staff believes that by acting now the system will be able to reap some of these rewards, as well as being prepared for a future where TVA financial mandates require they be in place.

The current billing and customer service software, metering technology and system operation technologies will not support anticipated rate structures and will not provide the tools necessary for Oak Ridge to operate and control its system in an effective manner.

Project:	Electric Distribution System Improvements	ProjectType:	Capital
Program:	Utilities	Responsible Department:	Electric

Description: This project provides for the upgrade of existing system components, including conductors, underground service vaults, and the addition of specific protection devices. It describes non-routine work done by the department to rectify identified inadequacies, along with items required to enhance system performance.

Status: All circuits are continually monitored for overloading, deterioration or other conditions that require updating. Cost are included for this.

Underground cable failure and replacement continues to be a major effort, but we are decreasing emphasis. Out year projections have been left unchanged as progress through the system indicates a reduction will be in order at that time, but cost projections have been increased slightly to cover higher material cost. Other improvements are made in small sections.

Justification: Line segments are routinely evaluated via the Department's system model for potential use in switching operations, alternate feeds and line loss; as well as age, condition and functionality. Other structures, particularly underground vaults, need to be upgraded. With new equipment installed, annual operating costs should decrease and system safety improved. Additionally, underground cables in parts of the City are reaching the end of their useful life.

Project:	Electric Substation Improvements	ProjectType:	Capital
Program:	Utilities	Responsible Department:	Electric

Description: This project allows for equipment upgrades and replacement in substations, including equipment used for security.

Status: Replacement of protective relays is currently underway with a view toward standardization and future electronic (SCADA) control. Nearly all voltage regulators need new controllers installed. Additionally, security is being tightened via broadband communications and improved security systems. Communications will be through a fiber optic system.

Justification: Communications: For a number of years, we have used telephone lines to monitor alarm conditions, a system which has prevented many outages and helped the situation somewhat. Current technology equipment being installed in substations, however, has significant communications capability, which will require faster more secure communication. Additionally, the security of the stations, both from a homeland security standpoint and from a pilferage standpoint needs to be improved. Equipment Upgrades: Many of the relays in the field are antiquated units for which parts are becoming rare. We envision moving equipment in the station into the field and replacing the station equipment with newer more reliable equipment. Voltage regulator controls also need replaced.

Project:	Facilities Expansion for New Loads and Services	ProjectType:	Capital
Program:	Utilities	Responsible Department:	Electric

Description: This item includes various elements of the Department's efforts to serve new loads with the exception of Substations and major feeder lines. These include line extensions, construction within subdivisions and other such activities. Cost depends on development activity and should be treated as a place holder.

Status: The cost and timelines for these projects are development driven, and thus difficult to predict. Although some development is occurring, it is in built up areas, reducing expenditures. Projections in the future assume an economic recovery in the long run.

Justification: This expense is required to serve new loads under existing council policy. All cost expended in this item are protected by the City's justified investment policy, which should provide for cost recovery through the rate over time.

Project:	Street Light Improvement Program	ProjectType:	Capital
Program:	Utilities	Responsible Department:	Electric

Description: This project provides for the correction of problems to improve the level of street lighting within the city. Current funding allows for minor improvements to critical need locations. Based on interest expressed in past years, an item has been added for "high-efficiency" and dark sky compliant lighting.

Status: Street light improvements are ongoing, depending on needs. The high-efficiency lighting component is planned for use in a park area this year. Future use is somewhat nebulous and will have to be defined, but as prices continue to fall, some units can now be used with a reasonable expectation of cost recovery. A significant experimental program is proposed for next year. Although not shown, if it is successful it will be continued and expanded.

Justification: The Electric Department has a street light survey of the City and has policies and guidelines for street lighting. This program will address the street lights in areas with deteriorated or inadequate lighting. No money is included for significant new lighting.
Council and Planning Commission have expressed interest in dark skies, high-efficiency lighting. Funds are provided to support this interest.

TOTAL CAPITAL IMPROVEMENTS PROGRAM						**$5,150**	

Project:	Long Term Electric System Needs	ProjectType:	Capital
Program:	Utilities	Responsible Department:	Electric

Description: These projects reflect anticipated system needs that will be triggered by specific events or new loads, but which are unlikely over the next few years.

Status: These projects are all conceptual in nature and awaiting need. Cost can vary significantly based on a number of factors.

Justification: Transmission line project will improve reliability in remote areas such as extreme west end and provide alternate feeds for large loads.
Power transformer will be needed upon failure at Substation 600.
A remote substation might be required at any of several sites, depending on load distribution and nature.
Continued interest in the Heritage Center for large power users may require a station on site at that location.

FIRE

Capital Improvements Program - Capital

Summary Of Projects - ($000's) Fire Department

Project	*FY2014*	*FY2015*	*FY2016*	*FY2017*	*FY2018*	*FY2019*	*TOTAL*
Fire Department							
Fire Station Vehicle Exhaust Systems		158	0	0	0	0	158
TOTAL CAPITAL IMPROVEMENTS PROGRAM		**$158**	**$0**	**$0**	**$0**	**$0**	**$158**

Project:	Fire Station Vehicle Exhaust Systems	ProjectType:	Capital
Program:	General	Responsible Department:	Fire Department

Description: Install National Fire Protection Association (NFPA) approved direct capture vehicle exhaust systems in all four fire stations.

Status: The ORFD fire stations are not configured in a manner to remove bunker gear storage in the truck bays as is now required, but were at one time fitted with a vehicle exhaust system. The exhaust systems in place now are no longer being used.

Justification: One of the major causes of cancer in firefighters has been linked to the vehicle exhaust in the fire stations. NFPA has revised fire station designs to minimize the effects of vehicle exhaust and have included exhaust systems. The ORFD fire stations are not configured in a manner to remove bunker gear storage in the truck bays as is now required, but were at one time fitted with a vehicle exhaust system. The exhaust systems in place now are no longer being used for several reasons. They are manually operated systems and must be removed from the vehicle before moving the vehicle. They do not capture all of the exhaust as required by NFPA and tend to remove as much heat from the building as exhaust. Without modifications, they do not match up to the ORFD vehicle exhaust systems on the vehicles as vehicle are moved from station to station. The new system is a standardized exhaust connection which can be operated on the vehicles inside the truck bay during winter months and follows the truck out of the bay and automatically disconnects at a set point to minimize exhaust while the vehicle is leaving the bay. This system can be inspected in operation at various fire stations in the area.

Project:	Jackson Square Parking Lot/Plaza	ProjectType:	Capital
Program:	Trans. Enhancement	Responsible Department:	Public Works

Description: This project will transform the Jackson Square Townsite parking lot into a landscaped public plaza in an effort to increase mobility and provide better access to local small businesses and cultural activities.

Status: Several studies on Jackson Square have been conducted over the past few years and findings indicate that revitalization is needed. During the Fall 2012, staff will begin the selection process for professional engineering services according to the grant requirements.

The estimated non-reimbursable $80,000 for engineering design and right-of-way will be spend in FY 2013.

Justification: The Planning Commission believes this revitalization project in Jackson Square will provide numerous social and economic benefits to the community. Current retail shops and business in Jackson Square will thrive as commuters that work in the Square are encouraged to stay and shop, while new businesses will relocate to the Square as it becomes a more attractive and walkable area.

Project:	Raw Water Intake and Raw Water Booster Station	ProjectType:	Capital
Program:	Utilities	Responsible Department:	Public Works

Description: This program provides on-going capital improvements to the Raw Water Intake and Raw Water Booster Station necessary to ensure the physical and mechanical structure allowing raw water from the river to be continuously pumped to the Water Treatment Plant to produce drinking water. DOE had owned and operated these facilities since their construction in the early 1940's. The operation of these facilities provides potable water to both the Y-12 and ORNL facilities, as well as, the City of Oak Ridge. The City assumed ownership and operational responsibilities from DOE on May 1, 2000.

Status: The roofs on the booster station and all buildings at the river intake have been replaced.

Justification: This project is part of the continued plan for rehabilitation of the City's Water Treatment Plant, which includes:

1. Replacement of five pumps and motors, and controls and switch gear at the Raw Water Booster to begin in FY15.
2. Replace the traveling bar screen assembly and make repairs and modifications to ladder cages and grating at the Raw Water Intake in FY15.
3. Replace the electric lines that feed the Raw Water Intake in FY15.
4. Replace motors, controls and switch gear at the Raw Water Intake in FY16, FY17 and FY18.
5. Clean and paint Raw Water Tank at the Raw Water Booster Station in FY17.
6. Clean and paint interior and exterior of buildings when mechanical repairs are complete.

Project:	Transportation/Pedestrian/Bicycle Improvements	ProjectType:	Capital
Program:	Transportation	Responsible Department:	Public Works

Description: This project is to provide funding to improve traffic capacity/safety, school crossings, and bicycle/pedestrian safety at various locations within the City as identified by transportation enhancement projects and the Oak Ridge Bicycle and Pedestrian Plan. Initial projects are located at intersections along Oak Ridge Turnpike and Illinois Ave. Improvements include crosswalks, pedestrian signals with countdown timers, traffic signs, pavement markings, and new sidewalks to connect missing link sections.

Status: The funding source is the Special Programs Fund for transportation enhancement projects.

Minor projects completed in 2011 included installation of rumble strips on Emory Valley Road between the greenway and street, pedestrian crosswalk enhancement along the Oak Ridge Turnpike, Illinois Avenue and other intersections, and traffic signs along a designated east-west bicycle route.

A major project was designed by consultants during the fall of 2011 with project construction completion during the fall of 2012. The project included new sidewalk construction on Illinois Avenue, Jefferson Circle and other missing link sections within the downtown business section of the City and geometric improvements at the Oak Ridge Turnpike/Illinois Avenue intersection.
Improvements for FY13 include pedestrian push button activated warning signs at three ped crossings on Melton Lake Drive at Amanda Dr, Rivers Run Blvd and the greenway crossing ~200 feet west of the Emory Valley Rd intersection. Improvements projected for FY14 include pedestrian enhancements on Oak Ridge Turnpike at Georgia, Tyler, West Main, Lafayette, Tulane and Robertsville.

Justification: Oak Ridge City Council has adopted the Oak Ridge Bicycle and Pedestrian Plan and has passed a resolution authorizing approval of expenditures from the Special Programs Funds for transportation enhancement projects as identified by city staff. Bike/Ped improvements are intended to provide traffic calming to enhance safety.

Project:	Water Treatment Plant Improvements	ProjectType:	Capital
Program:	Utilities	Responsible Department:	Public Works

Description:

This program provides on-going capital improvements to the Water Treatment Plant necessary to ensure the plant's physical and mechanical structure allowing it to continuously produce drinking water, which meets guidelines, established by State and Federal regulations. DOE had owned and operated the plant since its construction in the early 1940's. The plant provides potable water to both the Y-12 and ORNL facilities, as well as, to the City of Oak Ridge. The City assumed ownership and operational responsibilities of the Water Treatment Plant from DOE on May 1, 2000. Prior to the transfer to the City, a physical and structural analysis of the plant and its related facilities indicated that the plant's physical condition, while still functional, would require various improvements in order to replace outdated equipment with new, modern and more reliable equipment, which will allow for a cost efficient operation of the facility. Engineers identified a four million-dollar five-year improvement program and the financial support of this program has been factored into the rate structure. These improvements have been slowly implemented since the City assumed ownership. On-going capital maintenance funding will continue annually.

This project is subject to change based on future new regulations from EPA.

Status:

To date, the controller at the operations center, which includes meters and telemetry, has been replaced along with the turbidimeter, particle counter system, the filter control system, and numerous valves on the incoming raw water lines. The roof on the maintenance building has been replaced. The upflow clarifiers have been repaired and painted. Structural repairs have been done. The electrical upgrade has been postponed one year.

Refurbished Kathababar dehumidification system in FY11.

The 4 MG reservoir cover was replaced in FY11.

Construction of the Chemical Building to house liquid chlorine to begin in FY15.
Design of electrical upgrade began in FY11 with construction to continue through FY17.

Justification:

This project continues a plan for rehabilitation of the city's water treatment plant, which includes:
1. Replacement of approximately 700 feet of 24-inch raw water main due to age and location. It is one of two supply lines to the water treatment plant. Estimated cost of $350,000 originally scheduled for FY10. Due to easement discrepancies, it is planned to be constructed in FY13.
2. Clean and perform any needed repairs to the 3 MG reservoir at the Water Treatment Plant in FY 17.
3. Electrical upgrades to continue through FY17.
4. Clean and paint the building and replace windows in the main operations building to begin in FY14.

This item includes $250,000 annually for routine capital maintenance. These funds have already been incorporated into the water production costs and factored into the water rate. It is shown to assist with overall capital planning at the plant.

Project:	West End Development - Sewer	ProjectType:	Capital
Program:	Utilities	Responsible Department:	Public Works

Description: This project identifies required sewer infrastructure needs for development on the western portions of the City.

Status: A Wastewater Treatment Plant was constructed to handle the Rarity Ridge development and flow from ETTP and Horizon Center with a plant capacity of 0.6 MGD. Further expansion can be accommodated as demand increases.

The City's WWTP at the Clinch River Industrial Park was decommissioned and replaced with a new pump station and forcemain directing flow toward the system at ETTP, ultimately to our Rarity Ridge plant.

The City took over four wastewater pumping stations when it took portions of the wastewater collection system for ownership and maintenance at ETTP in May 2008. All four were in poor condition and none met TDEC standards. One was rehabilitated in-house using the existing structure. Public Works Engineering believes one can be eliminated by constructing a gravity sewer line to redirect the flow. Design of this project is currently under contract. The remaining two will need to be evaluated for design and replacement.

Justification: To provide sewer service to the western portions of the City. Several projects have been identified.

1. Replace CRIP WWTP with pump station and forcemain - complete.
2. Sewer Breeder Site-connect site to CRIP station - development driven.
3. Further expansions to Rarity WWTP as needed - development driven.
4. Rehabilitation of pumping station # K1204-9 - complete.
5. Design for elimination of pumping station # K1204-1 - under design. Construction to be completed this FY.
6. Replacement of pumping station #'s K1204-4 and K1204-10 when possible.

Project:	West End Development - Water	ProjectType:	Capital
Program:	Utilities	Responsible Department:	Public Works

Description: This project identifies required water infrastructure needs for development on the western portions of the City.

Status: Construction of water service infrastructure to the initial phases of Rarity Ridge is complete. This includes a connection to Cumberland Utility District, a booster pump station, elevated storage tank and all interconnecting piping. Additional work is identified to connect this development to the completed west end water infrastructure.

Except for the west end reinforcement, these projects will be driven by development. Items shown as placeholders may move forward as the west end projects develop. The City was awarded a Federal Grant to assist with interconnecting the ETTP water system and the Rarity Ridge water system. This project is currently under construction to be completed this FY.

Justification: The water system master plan identified a need to reinforce water delivery to the west end of the existing system. This will also provide additional water capacity for westward expansion. A line from the City's Water Treatment Plant to the west end of the existing system and additional elevated storage is proposed for this reinforcement to meet full demand; however, with the construction of a new waterline as part of the recent Turnpike improvement, the short term needs should be met and this item deferred until further development requires it. With the new line on the Turnpike complete, the ETTP plant can be decommisioned and funding to accomplish this is identified. The 4 million gallons of storage tanks will remain to satisfy westend storage requirements.

Infrastructure to the Breeder site will be development driven. Funding for these projects will be a combination of local, private, Federal and grant funds yet to be determined.

Existing 2.5 mil gal water tank was in need of rehab work when the city took over operation of the ETTP water system. Includes roof replacement and interior/exterior painting in order to be in compliance with TDEC.

Public Works/Fire Department							
Fire Station 2 Building Study	18						18
TOTAL CAPITAL IMPROVEMENTS PROGRAM	**$18**						**$18**

Project:	Fire Station 2 Building Study	ProjectType:	Capital
Program:	General	Responsible Department:	Public Works/Fire Department

Description: Perform an engineering study to determine if the east side of building is still settling and the cost to stop the settling and repair the structure.

Status: The engineering study will be initiated by Public Works. Fire Chief Kerley will pursue comparing the cost of building repairs to the cost of relocating the station to serve additional properties, which are not located within 5 miles of a fire station and receiving an ISO class 10 (no fire protection) rating.

Due to other demands on the capital project fund, this project was deferred by one year.

Justification: Study the cost of repairs to station 2 and look at the feasibility of relocating station 2 vs. building an additional station to serve those properties outside the 5 mile response zone of station 2 and 3.

Properties which do not have sprinkler systems but are within 5 miles of a fire station and 1000 feet of a fire hydrant have an Insurance Service Office (ISO) rating of Class 3, which saves approximately 35 to 40 percent on property insurance. Properties which do not have sprinkler systems but are within 5 miles of a fire station but more than 1000 feet of a fire hydrant have an Insurance Service Office (ISO) rating of Class 7, which saves approximately 15 percent on homeowners insurance policies. Properties which do not have sprinkler systems but are located more than 5 miles from a fire station have an Insurance Service Office (ISO) rating of Class 10 (no fire protection). There are a number of properties (homes, apartments, condos and buildings) in the southeast quadrant of the City which are located more than 5 miles from an Oak Ridge fire station.

Summary Of Projects - ($000's) Public Works/Library

Project	*FY2014*	*FY2015*	*FY2016*	*FY2017*	*FY2018*	*FY2019*	*TOTAL*
Public Works/Library							
Oak Ridge Library Renovation and Expansion		500	5500				6000
TOTAL CAPITAL IMPROVEMENTS PROGRAM		$500	$5,500				$6,000

Project:	Oak Ridge Library Renovation and Expansion	ProjectType:	Capital
Program:	General	Responsible Department:	Public Works/Library

Description: The proposed project will renovate and enlarge the Public Library, and is being put forward at the request of the Library Director. For estimating purposes, a doubling of the existing facility is being proposed.

Status: An RFQ for professional services to more accurately determine expansion needs was released in November 2009 and an architectural firm was selected. Some maintenance improvements are being included in other projects. Depending on the scope and timing of any expansion, these improvements may be combined with this renovation project. The feasibility study was completed by spring of 2011. It is projected that if funding is available, the design contract will be awarded in FY15 with the construction contract awarded in FY 2016.

Justification: The Library serves all segments of the population. The current facility opened in 1970 and is in need of significant renovation. Growth in collection and services has exceeded original facility capacities. Expansion will provide space for the larger collections and expanded services which are requested by the public. The Oak Ridge Room and the historical collections are essential to the community and need space beyond current facility constraints. Funding will be sought from DOE and other sources; however, funding is undetermined at this time.

Project:	Big Turtle Park	ProjectType:	Capital
Program:	Recreation and Parks	Responsible Department:	Recreation and Parks

Description: The proposed improvements continue the phased development of the former treatment plant site into a community park area primarily serving western Oak Ridge. FY 2016 improvements include the installation of a picnic shelter and the construction of a paved walking trail that encompasses the park and joins the greenway that runs along Poplar Creek and the construction of tennis courts on the site as replacements for the old Jefferson Courts.

Status: Big Turtle Park is currently used for soccer, softball and football. Prior improvements include the extension of the softball field to 300 feet, installation of an underground irrigation system at the softball field, the construction of a full-sized soccer field with underground irrigation and an ADA compliant parking lot, side walk, water fountain and unisex restroom, some minor landscaping, demolition of a concrete sludge digester and construction of a new playground.

Justification: Prior improvements include the construction of the softball field, irrigation, restrooms-ADA compliant, soccer field and ADA complaint parking lot, sidewalks and water fountain. The continue development of this park is essential to provide recreational services to the west end of the City as new residential areas are developed. Big Turtle Park is a regional park servicing the Roane County section of Oak Ridge.

Project:	Briarcliff Park	ProjectType:	Capital
Program:	Recreation and Parks	Responsible Department:	Recreation and Parks

Description: The proposed project includes continued development of eight acres of Parcel 616 into a neighborhood park. General park improvements are planned for FY2016. Neighborhood input on improvements will be obtained at time of funding availability.

Status: Prior improvements to the park include the construction of a parking lot, installation of playground equipment in 1987, park benches, drinking fountain, split-rail fencing, and landscape improvements. ADA access was completed during FY2013.

Justification: The Comprehensive Plan outlines a plan to develop a neighborhood park within walking distance of each neighborhood. Continued development of Briarcliff Park will fulfill that requirement.

Project:	Carl Yearwood Park/Playground	ProjectType:	Capital
Program:	Recreation and Parks	Responsible Department:	Recreation and Parks

Description: In FY 2016 planned improvements include installation of play equipment.

Status: Yearwood Park currently offers a lighted softball field, restrooms, paved parking and picnic shelter with tables. The site can also be used for baseball and soccer. In FY 2000 a fenced skateboard/roller blade facility, adjacent to the softball field, approximately 16,000 square feet was completed.

Justification: Carl Yearwood Park not only serves the needs of the softball leagues within the city, it also serves as the tournament site for invitational softball tournaments (three to five each summer). The additional field and parking, along with the combination restroom/concession stand, will not only serve the local needs but will provide an additional multi-use facility for tournaments, including baseball and soccer.

Project:	Elm Grove Park	ProjectType:	Capital
Program:	Recreation and Parks	Responsible Department:	Recreation and Parks

Description: Improvements proposed for FY 2016 include the construction of a picnic shelter.

Status: The former Elm Grove school site was designated as a neighborhood park with initial development beginning in FY 1988 after demolition of the school, site grading and grassing. After neighborhood meetings we held to develop a priority list of requested park features and needs, the installation of playground equipment, a basketball court, water fountains, and fencing was initiated in FY 1988. After additional neighborhood meetings in FY 1996, a gravel walking trail was constructed. In FY2011, a new playground was constructed.

Justification: The Comprehensive Plan outlines a plan for the development and renovation of a neighborhood park system that would be within walking distance of every neighborhood in Oak Ridge. Development of Elm Grove Park at the site of a former school will provide a park area within the neighborhood. Play equipment and surfacing which does not meet ASTM, SPSC and ADA safety standards and requirements, will be replaced to comply with new standards and requirements.

Project:	Greenway Implementation	ProjectType:	Capital
Program:	Recreation and Parks	Responsible Department:	Recreation and Parks

Description: The Citywide Greenway system recommended by the Greenway Task Force has been endorsed by City Council and has now moved into the implementation stage. Greenway funding enables the City to continue leveraging the grant funds for greenway development. Rails to Trails is planned for FY 2015.

Status: The City Council, Planning Commission, and EQAB have all adopted the Greenway Concept and it is now in the implementation stage. Grant funding has been approved for Emory Valley Road. In 2002, Phase III of the Melton Lake Greenway was completed. The Emory Valley Greenway was completed in 2006. Phase IV of the Melton Lake Greenway was completed in 2012.

Justification: The Greenway system will bring the advantage of parkland nearer to all Oak Ridge citizens. Other advantages include: (1) provides for the opportunity for motorless commuting; (2) provides flora and fauna habitat and learning experiences about wildlife; (3) provides a means of enjoyable physical exercise; (4) links strategic locations in the community including parks, schools, and shopping areas; (5) reduces short trip auto traffic; (6) provides a buffer zone.

Project:	Groves Park	ProjectType:	Capital
Program:	Recreation and Parks	Responsible Department:	Recreation and Parks

Description: The proposed project envisions the development of a neighborhood park. The park would be developed in conjunction with private funding from the community. The project consists of a 20-car parking area in FY 2015, and a play area in FY 2016.

Status: Former land fill area. An 18-hole disc golf course was built in 2008.

Justification: Adjacent residential area and development across the street support the need for a neighborhood park.

Complies With Policies F-1, P-12, PK-3, and Q-6

Project:	Highland View Park	ProjectType:	Capital
Program:	Recreation and Parks	Responsible Department:	Recreation and Parks

Description: The proposed project will improve the present facilities at Highland View Park. FY 2016 improvements include the installation of a walking trail.

Status: Past improvements include the installation of a shelter and water fountain, and installation of new play equipment in 2009. The parking area was completed in 2010.

Justification: Highland View Park currently consists of a small playground, a forty-year-old softball backstop, and an outdated shelter. The new play equipment meets ASTM, CPSC safety standards and ADA requirements. The neighborhood and visitors to the Children's Museum heavily use the park.

Upgrading this park area will enhance the neighborhood.

Complies With Policies F-1, L-16, P-12, PK-4, and Q-6

Project:	Jackson Square Tennis Courts	ProjectType:	Capital
Program:	Recreation and Parks	Responsible Department:	Recreation and Parks

Description: The project was part of a multi-year program to enhance tennis facilities in Oak Ridge. Proposed FY 2017 improvements include a shelter to support league and tournament activities.

Status: Construction of eight new courts and lighting was completed in FY 2000.

Justification: With the completion of the eight new courts, tennis activity and tournaments have increased at the Jackson Square Courts.

Complies With Policies F-1, L-16, P-12, PK-3, and Q-6.

Project:	LaSalle Park	ProjectType:	Capital
Program:	Recreation and Parks	Responsible Department:	Recreation and Parks

Description: FY 2016 improvements include the construction of a picnic shelter and tables.

Status: LaSalle Park is currently used for soccer practice/matches and football practices. A soccer field was constructed in FY 1989. In FY 1991 improvements included removal of handball courts, construction of a parking lot, softball backstop and play equipment. The split-rail fence was replaced in FY 1999. FY 2011 improvements included the installation of new play equipment and construction of an upper parking lot.

Justification: LaSalle park is currently used extensively as an athletic area and offers very little to meet the needs of the neighborhood. The park's primary use is for soccer matches and, to a lesser degree, a place to practice softball, baseball, and football. A picnic shelter will greatly enhance the usability of the park.

Complies With Policies F-1, L-16, P-12, PK-4, Q-6, and Q-7

Project:	Milt Dickens Park	ProjectType:	Capital
Program:	Recreation and Parks	Responsible Department:	Recreation and Parks

Description: The proposed project in FY 2016 includes the installation of a picnic shelter.

Status: Prior improvements to the park include a soccer field, parking lot, drinking fountain, playground and fencing around the park.

Justification: The installation of a picnic shelter will enhance the overall functions of the park for both park usage and soccer games.

Complies With Policies F-1, L-16, P-12, PK-4, and Q-6

Project:	Parking Lot Construction	ProjectType:	Capital
Program:	Recreation and Parks	Responsible Department:	Recreation and Parks

Description: Overflow parking at Scarboro Park is scheduled for FY 2016.

Status: Several parking areas at neighborhood parks and athletic fields have been renovated/rehabilitated in the past ten years. Construction of paved parking at Haw Ridge in 2012.

Justification: Haw Ridge Park has a gravel parking area that offers poor drainage/potholes and no designated or handicap spaces. With the construction of the Melton Lake Greenway, Haw Ridge Park will support the trail.

Complies With Policies F-1, L-16, P-12, PK-3, and Q-6

Project:	Rowing Improvements	ProjectType:	Capital
Program:	Recreation and Parks	Responsible Department:	Recreation and Parks

Description: The rowing venue on Melton Hill Lake would be upgraded to include new docks, timing device, expansion of the existing boathouse and widening the course.

Status: The rowing venue has hosted numerous national rowing events and regional regattas.
The dredging was completed in early 2004. Course improvements were made in FY 2007.

Justification: Rowing events have contributed to the quality of life in Oak Ridge. The events have brought visitors and tax revenue to the City. Enhancing the existing course will increase the opportunity to attract national and international events to the City.

Complies With Policies F-1, F-14, L-16, P-12, PK-4, and Q-6

Project:	Solway Park	ProjectType:	Capital
Program:	Recreation and Parks	Responsible Department:	Recreation and Parks

Description: The proposed project for FY 2016 includes the installation of a picnic shelter, picnic tables, grills, landscaping, the development of an open space/multi-use area, re-routing the traffic flow, and the installation of playground equipment.

Status: The park area, a previous TVA park site, was deeded to the City with a recreational restriction from TVA. Past improvements include paving of the gravel roadway at the central park site, the installation of traffic control barriers, security lighting at the west boat launch site, boat dock renovations, and erosion control planting. FY 2001 included the construction of a handicap accessible fishing pier and handicap parking adjacent to the pier, in which TVA and TWRA contributed $60,000 toward the project, which was 70% of the total cost.

Justification: No major improvements have been funded at the site other than the paving of the existing gravel roadway, the installation of security lighting at the boat launch site and in conjunction with TVA TWRA a handicapped accessible fishing pier and parking. With the development of Parcel A and already heavy use of the area, the basic improvements and upgrading of the area are needed as the site will become a focal point for the southeast section of the City.

This project will move into earlier fiscal years concurrent with building expansion in adjacent residential neighborhoods including Park Meade and Centennial.

Complies With Policies F-1, PK-2, and PK-3

Project:	Carl Yearwood Park	ProjectType:	Capital
Program:	Recreation and Parks	Responsible Department:	Recreation and Parks

Description: The proposed project entails the construction of a second field to be used as a combination softball, baseball and soccer field which includes 30/20 lighting, irrigation, fencing, bleachers and additional parking. Also included in the project is site work to develop this multiuse field, a combination restroom/concession stand, extension of and resurfacing of the existing parking lot and installation of play equipment.

Status: Yearwood Park currently offers a lighted softball field, restrooms, paved parking and picnic shelter with tables. The site can also be used for baseball and soccer. In FY 2000 a fenced skateboard/roller blade facility, adjacent to the softball field, approximately 16,000 square feet was completed.

Justification: Carl Yearwood Park not only serves the needs of the softball leagues within the City, it also serves as the tournament site for invitational softball tournaments (three to five each summer). The additional field and parking, along with the combination restroom/concession stand, will not only serve the local needs but will provide an additional multi-use facility for tournaments, including baseball and soccer.

Complies With Policies F-1, P-12, PK-3, and Q-6

Project:	Haw Ridge Park	ProjectType:	Capital
Program:	Recreation and Parks	Responsible Department:	Recreation and Parks

Description: Haw Ridge will be included in a Master Planning process that will include all park areas, athletic fields and open space public lands.

Status: Undeveloped and proposed.

Justification: Haw Ridge is a former AEC and TVA parcel that has been deeded to the City under a recreational restriction. This parcel will be developed as a regional park with input from the public.

Complies With Policies F-1, L-16, P-12, PK-4, and Q-6

Project:	Neighborhood Park with Designated Areas for Skateboarding and Rollerblading	ProjectType:	Capital
Program:	Recreation and Parks	Responsible Department:	Recreation and Parks

Description: The proposed project envisions the development of a multipurpose skateboard/rollerblade area at Carl Yearwood Park. Proposed improvements include the construction of a skatepark facility.

Status: Members of the skateboarding community have expressed the need for an area to be designated for the use of skateboarding and rollerblading. This interest was expressed to members of City Council as well as members of the Youth Advisory Board.

Justification: The proposed project envisions the development of a park area with multi-purpose use. As the sport grows and additional facilities are justified, a skate park will be constructed. The development of a professionally designed and approved skate park would increase economic development by drawing persons from outside the Oak Ridge community.

Complies With Policies F-1, F-14, L-16, P-12, PK-4, and Q-6

Project:	Pinewood Park	ProjectType:	Capital
Program:	Recreation and Parks	Responsible Department:	Recreation and Parks

Description: The proposed project will improve and expand the Pinewood Park facility. Improvements include additional site work, landscaping, and restroom/concessions.

Status: Prior work included paving of the gravel parking lot, installation of softball field lights, clearing and filling of adjacent property into an open space/practice soccer field.

Justification: The City does not have enough field space for games and practices. Renovations of athletic fields require adequate water in order to fertilize and develop turf. Due to heavy use of the field, irrigation is necessary to refurbish and repair.

Complies With Policies F-1, P-12, PK-3, and Q-6

Project:	Senior Enrichment Center	ProjectType:	Capital
Program:	Recreation and Parks	Responsible Department:	Recreation and Parks

Description: The proposed project envisions replacement of the Senior Center.

Status: The Senior Center currently resides in the Daniel Arthur Building on Emory Valley Road. In 2009, City Council approved a five-year lease with Anderson County for space at the Daniel Arthur Building. At the end of the lease period, the site could be transferred to the City for a new Senior Center. A Needs Assessment was completed in FY 2012.

Justification: With the increased attendance at the Center, additional meeting space and parking is needed. A move into temporary quarters was necessary while a new Center is planned.

Complies With Policies F-1, PK-9, Q-2, Q-6 and M-12.

Project:	Westwood Park	ProjectType:	Capital
Program:	Recreation and Parks	Responsible Department:	Recreation and Parks

Description: The proposed project will begin the development of Westwood Park. The park will be a neighborhood park primarily serving the Westwood area and West Outer Drive area. Meetings will be scheduled with neighborhood residents to discuss development and specific needs. In conjunction with other neighborhood parks, the installation of benches and play equipment is planned. Improvements include the construction of a picnic shelter, volleyball court, and security lighting.

Status: The proposed site is presently undeveloped. In 1996 a recreational lease was granted from DOE for the proposed park located at the intersection of Wisconsin and Whippoorwill.

Justification: This park will be developed as a passive recreation area and will provide limited parking for the North Boundary Greenway.

Complies With Policies F-1, P-12, PK-3, and Q-6

Project:	Wolfe Creek Park	ProjectType:	Capital
Program:	General	Responsible Department:	Recreation and Parks

Description: The proposed project envisions the development of a neighborhood park as part of the Wolfe Creek residential area.

Status: The area will be developed as a neighborhood park after substantial input for the surrounding residential parcel. Initial development could include play equipment, open turf area and passive play areas.

Justification: The Comprehensive Plan outlines a plan for the development and renovation of a neighborhood park system that would be within walking distance of every neighborhood in Oak Ridge.
